

ApeosWare
Management Suite 2

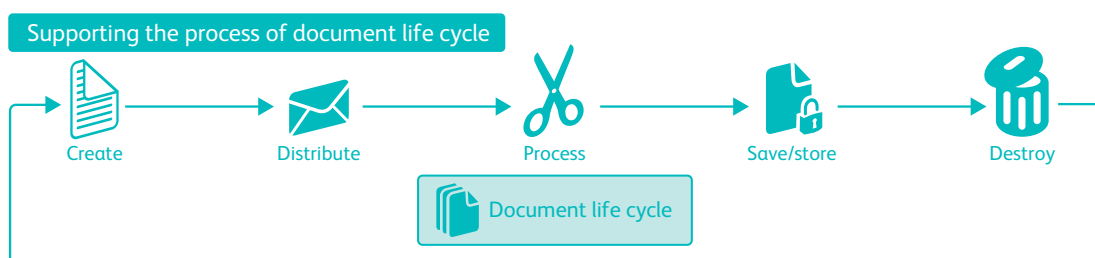

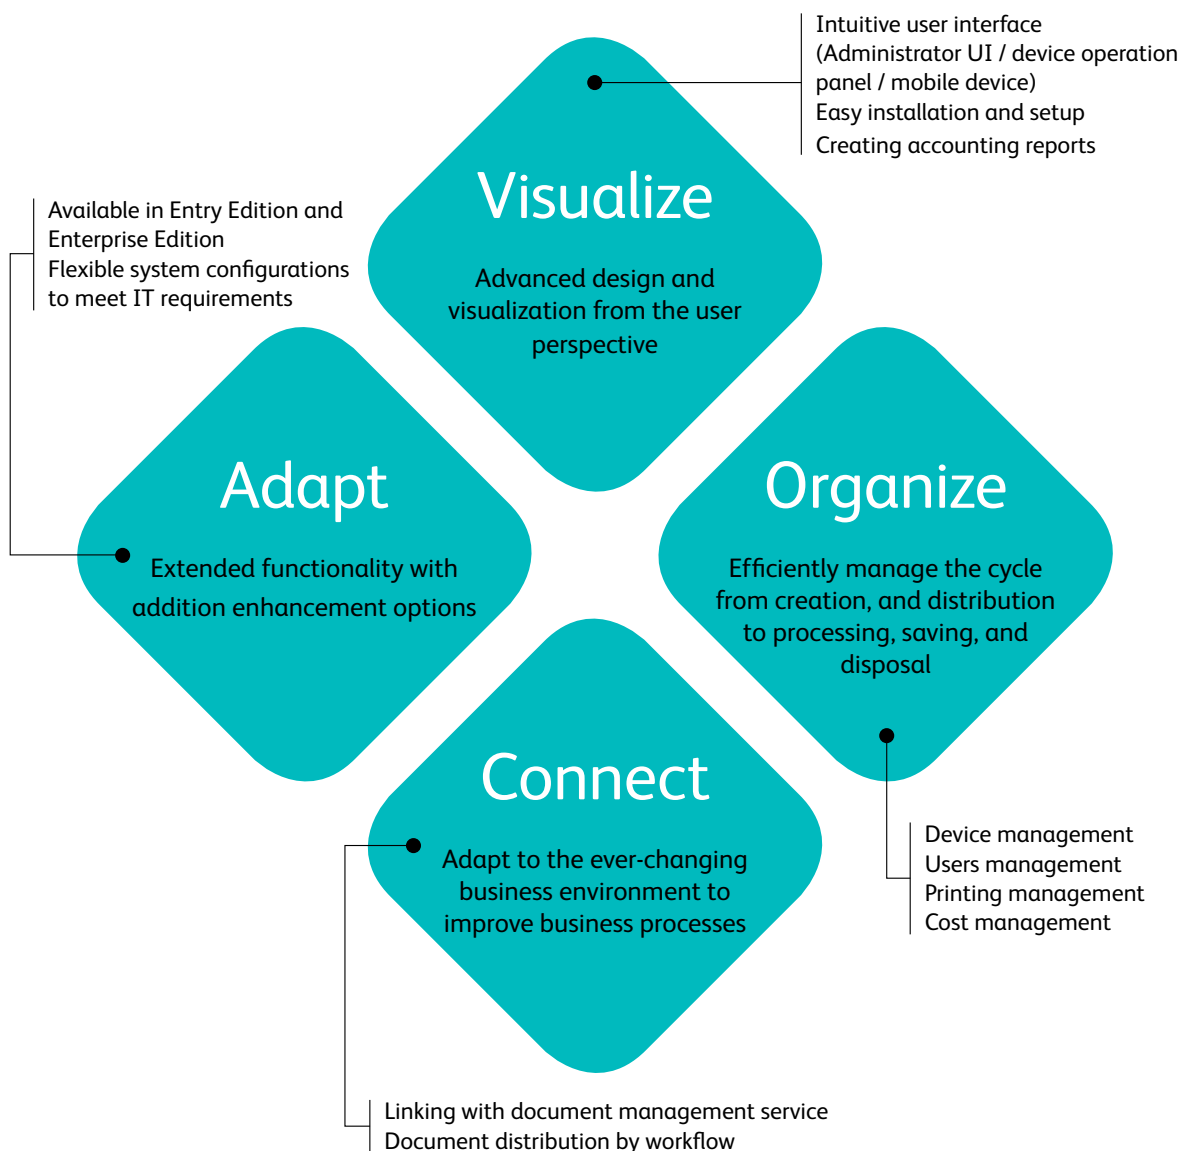

ApeosWare Management Suite 2

Smart & Powerful Through Document Communication

Promoting business communication with powerful documentation

Most businesses are faced with increasing numbers of multifunction devices, printers, faxes, and the growing needs to utilize mobile devices. The increasing numbers of devices and varying work styles lead to issues such as extra management work, risk of information leakage, increasing costs, heavy printing activities and longer work hours.

ApeosWare Management Suite 2 is a software that can manage devices and their usages, and provides integrated authentication, print output, log accounting, and document distribution. The new version of ApeosWare Management Suite enhances on four points to focus on customer's requirement. It promotes comprehensive document management to provide high value to customer business.

ApeosWare Management Suite 2 will

Visualize

Administrators are able to complete necessary settings and operations without looking at a manual that provide the system configuration, allowing immediate access to services. ApeosWare Management Suite 2 realizes a sleek system operation that removes tediousness with an easy-to-understand interface, simplifying settings and operations, and by pursuing visualization.

Organize

With ApeosWare Management Suite 2, the cycle of documents can be organized to increase operational efficiency of the administrators and strengthen governance for the business. Consistency is made possible as the system will inherit the grouping features set by the administrator and implement the same feature across the fleet of devices in the office. This ensure uniformed management for the status of registration, settings and application of the appropriate user profiles.

Connect

Customers exchange Information through a broad-range of devices and systems that include multifunctional devices, computers, operational systems, and cloud services every day in their business environment. ApeosWare Management Suite 2 connects to various devices and systems used by customers, and promotes input and output of documents.

Adapt

The functions to use and the amount of data to handle differ according to each customer. ApeosWare Management Suite 2 provides Entry Edition and Enterprise Edition product packages to provide the required function as necessary.

A new version for more convenience and efficiency.

Alleviate cost allocation work

Actualizes rule settings of reducing unnecessary printing

Smooth storage of scanned documents

Easy output commands from mobile devices

Try our trial version first

A trial version allows administrators and users a free 60-day trial. Please do not hesitate to experience how easy it is to adopt and use this software.

Reduce and improve the various challenges of input and output of documents such as management labor, risks of leaks, costs, output traffic, and delayed operations.

ApeosWare Management Suite 2

Visualize

Advanced design and visualization from the user perspective

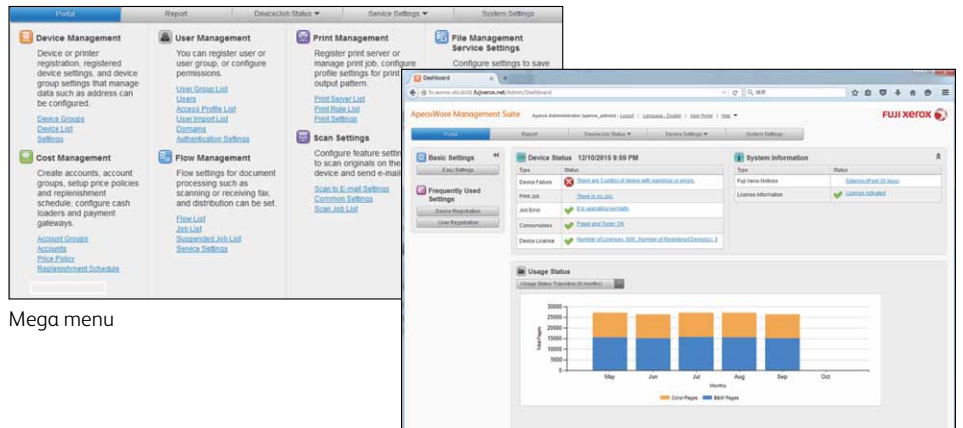

Easy-to-understand interface

To a busy administrator, reading a manual to learn procedures is just tedious...

An “Administrator UI” to learn operations while using the system

An intuitive interface makes settings and operations easy even without relying on the manual. Administrators reduce the time and labor required to learn the operations of ApeosWare Management Suite 2.

Visually-intuitive operations

Mega menu

Administrator portal

I want to operate devices with as few steps as possible...

Menu displayed on the control panel

Menus for the ApeosWare Management Suite 2 are provided on the control panel of the devices. You can quickly access to the operation service on the device. External linkage system such as DocuShare and SharePoint can be connected to the system to provide you with the same operational experience.

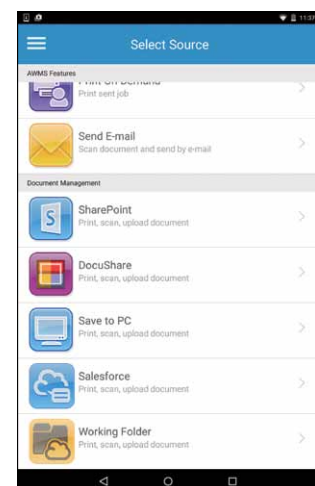

Multifunctional device Control Panel

I want to operate my mobile device the same way as my computer...

Direct operations from mobile devices

A specialized program is provided for mobile devices. Devices, users, and setting information specified on ApeosWare Management Suite 2 are applied to mobile devices to allow direct output and scanning by intuitive operations from the user interface. Devices to output and scan by using QR codes* can also be setup easily.

*“QR Code” is registered trademark of DENSO WAVE INCORPORATED in Japan and other countries.

Mobile device user interface screen

Easy installation and setup

I'm worried about the installation without an IT person at my company...

Settings screens navigate even the inexperienced users

ApeosWare Management Suite 2 has easy settings functions built in to automatically navigate users through screens until the settings are complete. Users will be able to install and specify the default settings themselves to limit the time and cost of adoption.

Welcome screen

Easy setup screen

Visualize procedures for settings

Creating accounting reports

I want to know the status of device usages to properly distribute the location of devices and to caution device overuse.

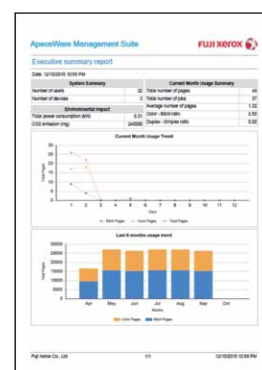

Creating over thirty different types of reports

A wide-range of reports can be created on the web browser using collected job log information such as the users of devices, sheets that are output, paper sizes, and time. The report function has been dramatically enhanced in ApeosWare Management Suite 2. A plethora of reports can be created across five categories.

Visualize usage status reports

A screen for creating web-based reports

Comprehensive usage breakdown report

Device usage by users - Mobile Firefox

ApeosWare Management Suite

Date Range: 13/09/2015 12:00 AM to 12/10/2015 11:59 PM

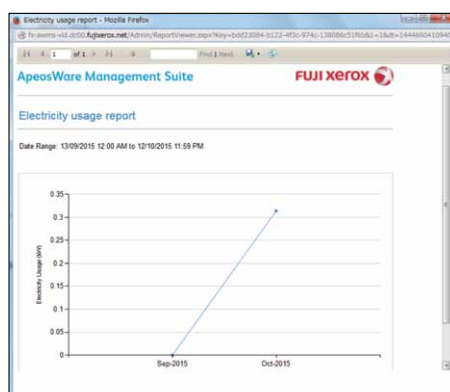

Transaction Type: Copy, Print

Users: crouser, dousser, scouser

Device Name	User ID	Color Pages	BBW Pages	Total Pages	Total Jobs
ApeosPort V C2276	crouser	438	580	1042	1042
ApeosPort V C3375	dousser	22	0	22	11
ApeosPort V C3676	scouser	11	6	17	17

Fuji Xerox Co., Ltd

Device usage fee reports per user

Power usage reports

Usage analysis report - Mobile Firefox

ApeosWare Management Suite

Usage analysis report

Date Range: 13/09/2015 12:00 AM to 12/10/2015 11:59 PM

Transaction Type: Copy, Print

Device: ApeosPort V C2276, ApeosPort V C3375, ApeosPort V C3676

Analysis Criteria: Trip

Device Group Name	Jobs	Impressions	BBW Rate	Color Rate	Black Rate	Actual Paper Reduction Rate	Color Reduction Rate	Black Reduction Rate	Possible Paper Reduction
Default Group	10126	10126	94.45	0.00	0.00	0.00	0.00	0.00	2477024

Fuji Xerox Co., Ltd

Usage fee analysis report

Main feature

- Web-based aggregation reports
- Custom settings
- Various output (Web/PDF/Office documents)

- Automated report settings (Email sending/shared folder storage)

Organize

Efficiently manage the document life cycle from the creation to disposal

Management of devices Reduce labor of settings by assigning groups

With the increasing number of devices, the burden on the administrator also increases...

Organize and manage settings information

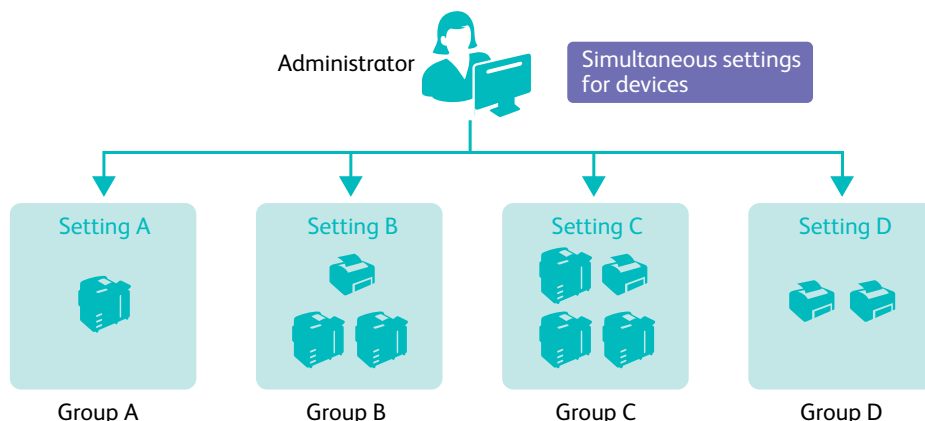

Device groups can be created and devices to manage can be registered to the group. It is possible to unilaterally managed settings information and to specify settings simultaneously across devices. Resetting devices is easy even in case of a device malfunction.

Email notifications of device statuses

This function monitors the status of devices and sends notifications by Email. Problems such as a lack of paper or paper jams can be handled in a timely manner.

Uniformly managing panel settings of devices

Buttons on the control panel of devices can be registered simultaneously from the server to drastically reduce the time for installation.

- | Main feature | | |
|--|--------------------------------------|---|
| •Management of devices and device groups | •Automated registration of devices | •Display of device statuses/meter information |
| •Reflection of device data | •Authentication/aggregation settings | •Notification settings for statuses |
| | | •Displays job log aggregation status |

Management of Users Manage departments and offices securely and all at once

I'm worried about security in an environment where many people use devices...

Strengthening security with user authentication

This function authenticate users when logging into devices to identify who is using the device before it is used.

Setting strict restrictions to functions and access privileges

Functions of devices and output of color can be restricted by individual, department, or position. This reinforces security and promotes effective TCO reduction.

Easily registering of user information

User information can be imported from LDAP, SQL servers, Active Directory®, and CSV files. This allows efficient registration and management.

*Users can register their card IDs from the control panel of multifunctional devices or their computer.

Feature and color restriction of devices

			
Part-time employee A	Employee B	Manager C	HR group
Only black & white Only copying	Color available Copy/print available	Color available No restrictions	Color available No restrictions Requires password entry

- | Main feature | | |
|---|-------------------------------|---------------------------------------|
| •Management of users and user groups | •Settings for access profiles | •Import of users |
| •Links with external authentication servers (domains) | | •Import of accounts* |
| | | •Settings for authentication features |
| | | •Self-registration of user card IDs |

*Entry Edition requires Cost Recovery Option.

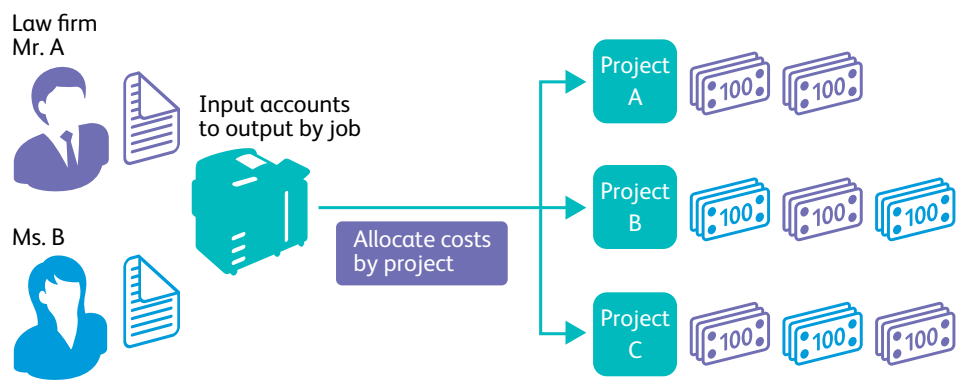

Cost Management Organize the cost incurred according to the output by project

I want to allocate the costs for output as well when invoicing customers, but there's no way to allocate these costs by project...

Allocate costs by project*

For example, for businesses that conduct multiple projects simultaneously such as law offices and construction companies, costs can be allocated to each project according to accounting results. This is achieved by inputting the accounts for each project when outputting from the devices.

*Optional for Entry Edition

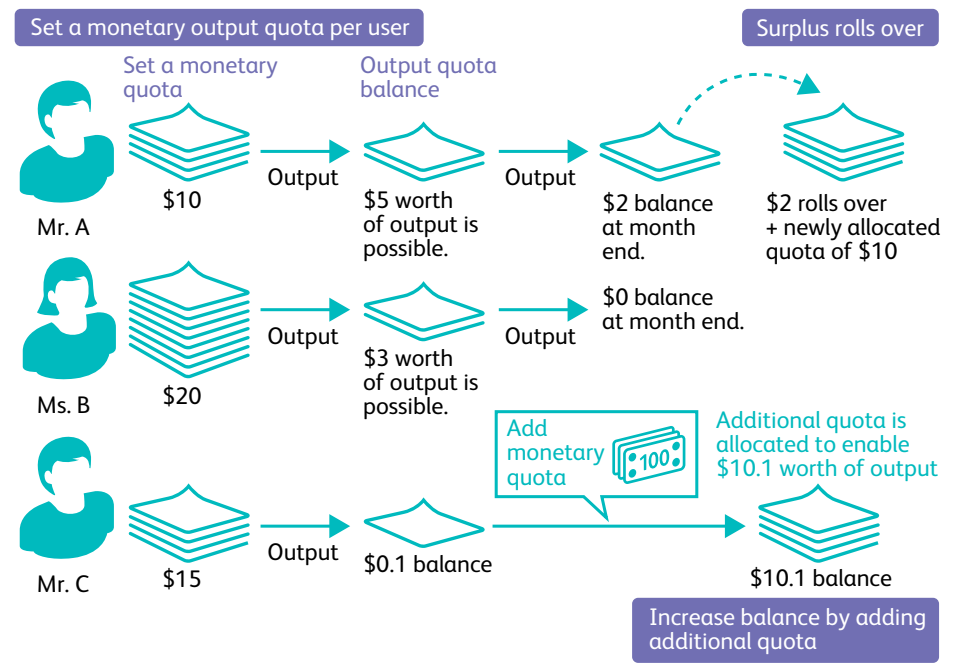

I want to fully manage the budget associated with output...

Decide and control the "balance"*

A balance can be set for each account to control the output costs. Flexible operations are possible by rolling over balances with a surplus to the next month or by allocating accounts with insufficient balances.

*Optional for Entry Edition

- Main feature
- Management of accounts
 - Creation of fee structure
 - Settings for replenishment schedules
 - Aggregation reports for each account

Connect

Adapt to the ever-changing business environment to improve business processes

Linking of scan settings with document management services Flexibly connect devices with systems

Can't I set the processing method or set the destination of delivery for the documents when scanning...

Consistent operations and easy login

Alleviate any uncertainty with the consistency of the operation screen, even when accessing various document management services. Once user IDs and passwords are registered in advance, there is no need log into document management servers every single time.

Simple settings from the control panel

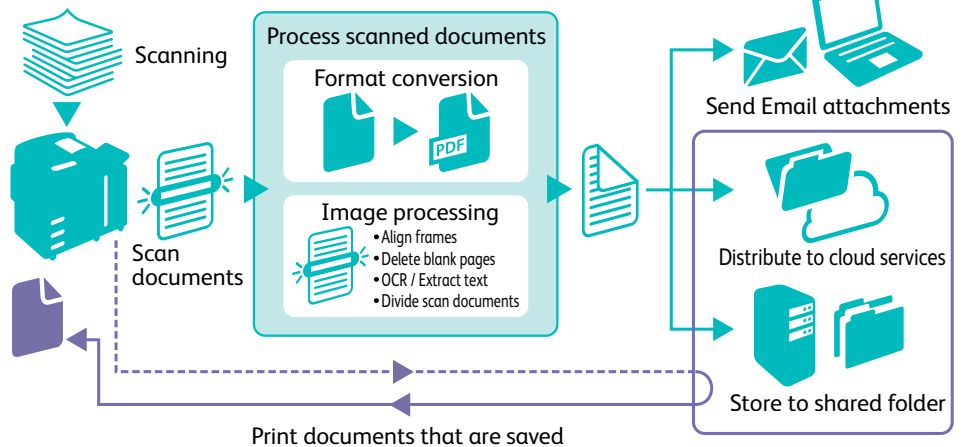

A simple flow function is provided to process and distribute scanned documents. Scanned documents can be attached and sent by Email or stored in a shared folder on the network.

Input and output documents in the cloud

For example, documents saved to cloud services can be accessed from the control panel of devices and output.

*SMB, FTP, Email are supported standardly. DocuShare, Microsoft® SharePoint® Server, Salesforce®, RightFax, Intellexox Infiniti are supported optionally.

Easily specify flow settings from the control panel of devices

Main feature

- Image processing
- Scan settings
- Email sending of scanned documents
- Links with document management services
- Printing of saved documents
- Email notifications
- Cost management*

*Optional for Entry Edition.

Document distribution using flows*

*Optional

Documents received by fax daily and scan documents... It's tough processing a large quantity of documents by hand...

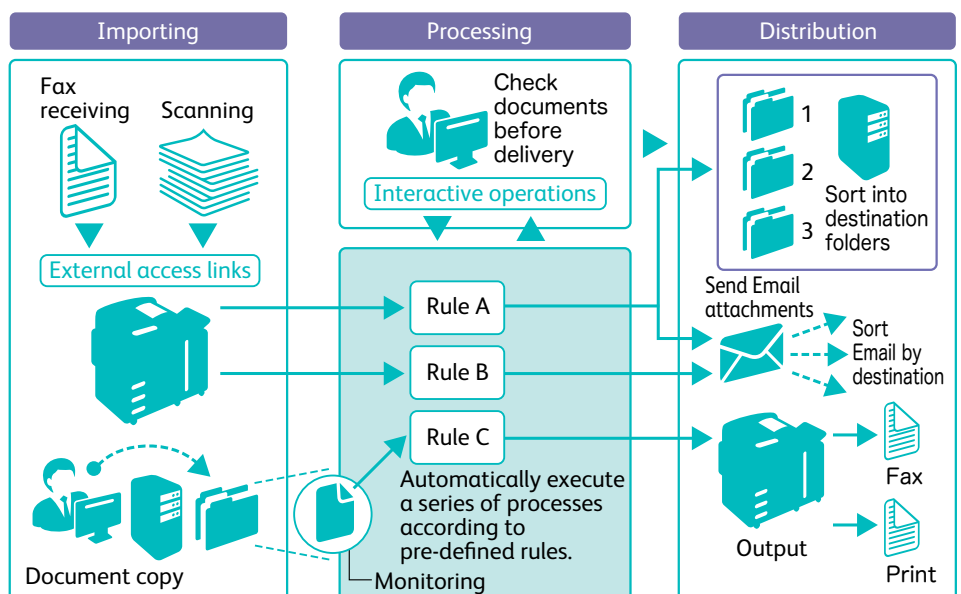

Standardize operation through settings in advance

Various processes can be set by establishing rules as "flows" in advance. A series of processes is performed automatically such as document processing, distribution, outputting, and saving by simply importing documents for fax receiving and scanning operations.

OCR and noise removal made possible

Processes such as format conversion and OCR processing that go along with importing documents can be preformed automatically. High-level processing that includes sorting for addresses based on the text strings extracted through the OCR process can be also standardized.

Connect to the next process in a timely manner without a paper intermediate

Main feature

- Import documents
- Generate data (Document names, QR code reading*, attribute mapping, form analysis*, etc.)
- Document distribution (Distribution jobs, multi-sending, form analysis result output*, etc.)
- Error notification

*Optional.

Adapt

Creating a system configuration that matches the customer's environment

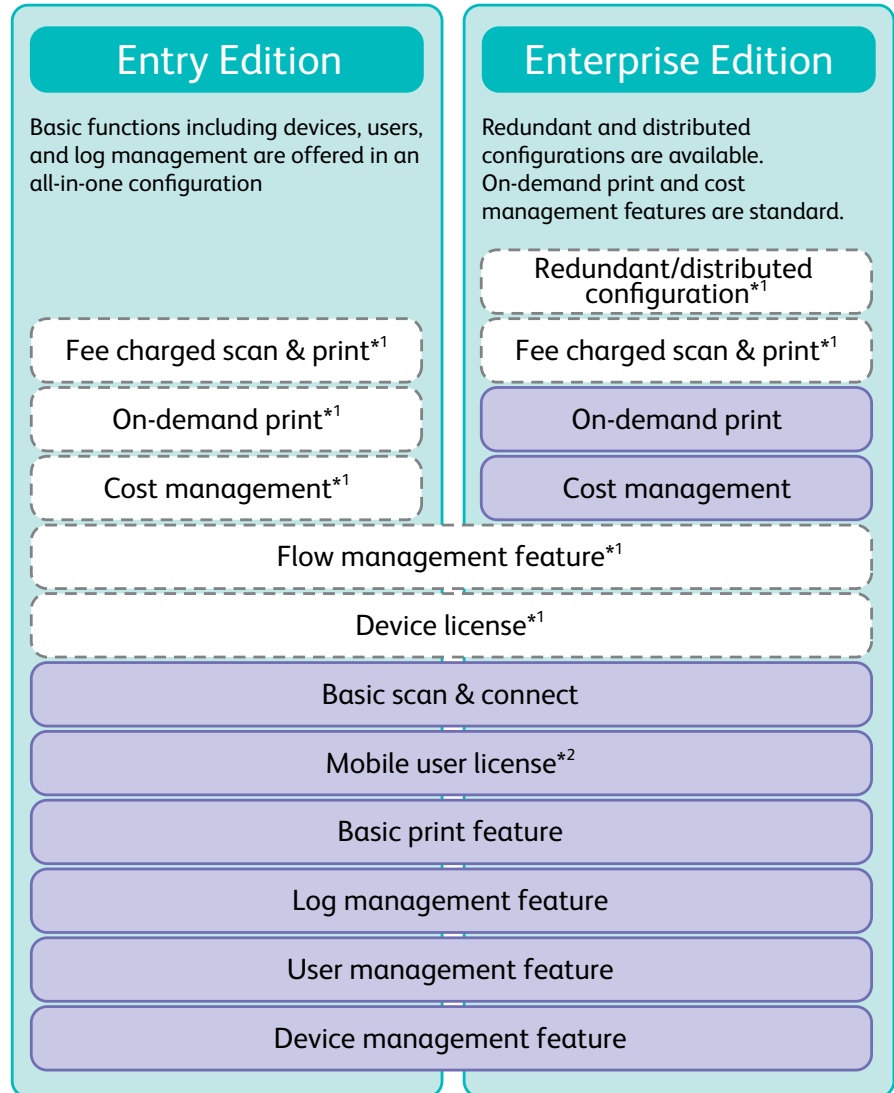

Entry Edition and Enterprise Edition are available Adapting to the purposes of customers

Selecting from two types of adoption

ApeosWare Management Suite 2 offers an "Entry Edition" for easy implementation and an "Enterprise Edition" with on-demand print and cost management as standard features. In addition, the functions can be adapted to the purposes of the customer.

Controlling the amount of data to handle by the specifications of computers

For the Entry Edition and Enterprise Edition, the amount of data to be handled by the system can be controlled according to the specifications of the server.

*¹ Optional

*² Separate user licenses are required for 11 or more users.

Flexible system configurations to meet IT needs Adapting to customer requirements

Supports "all-in-one", "redundant", and "distributed" configurations

ApeosWare Management Suite 2 can be configured as a system adapting to the IT needs of customers. In an all-in-one configuration, high-level features are bundled onto a single server. It allows input and output of documents with a minimum of investment and contributes to resolving the various challenges the customers may face. In addition, Enterprise Edition supports redundant and distributed configurations to satisfy high-level system requirements.

Example of server configuration

All-in-one*¹

Redundant*²

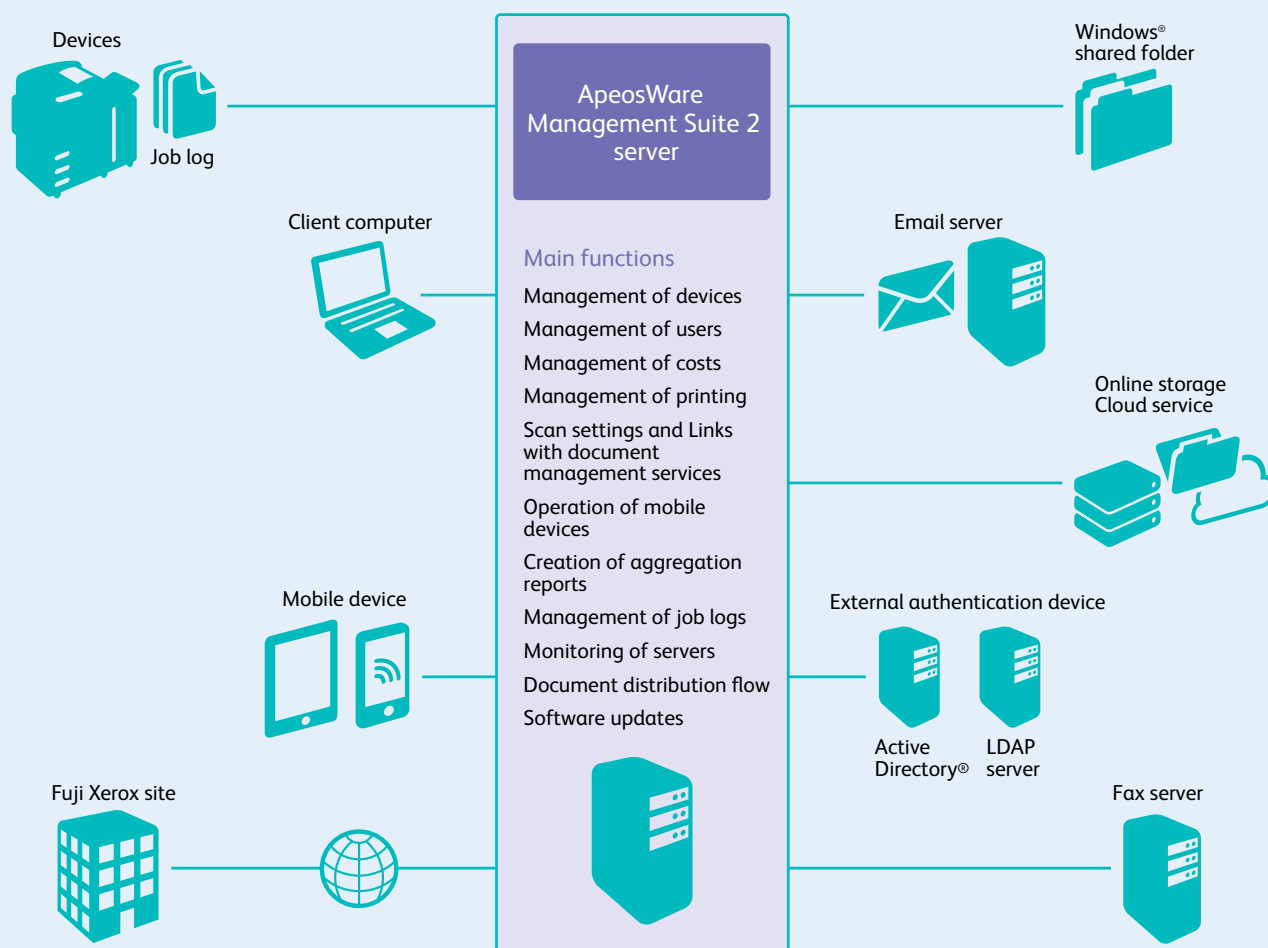

Decentralization*²

*¹ Entry Edition or Enterprise Edition

*² Only Enterprise Edition

System Configuration adapting flexibly to the customer environment

ApeosWare Management Suite 2 manages network devices such as multifunction devices and printers, and the users of those devices, and is a software that comprehensively manages authentication, output, log accounting and document distribution.

	Microsoft® SQL Server® 2008 R2 Standard [Service Pack 2] ⁷

*1 : Please refer to the Fuji Xerox website for the latest supported operating systems. Installation cannot be performed in the OS where domain controller is running. Installation cannot be performed in the OS which supports Intel® Itanium® Processor. If you want to create a PC in a virtual environment, assign the same resources as above "Hardware". Even if you assign the same resources as above "Hardware", you may see performance degradation depending on the operating circumstances of the host PC.

*2 : Multi-touch feature is not supported. The operations of features other than "Device Management", "User Management", "Job Log Management", "Accounting Report Creation", "Document Delivery by Flow", "Server Monitoring" are not guaranteed.

*3 : For 64-bit versions, ApeosWare Management Suite 2 software will run on WOW64 (Windows 32-bit on Windows 64-bit) emulation layer subsystem.

*4 : Server Core Option is not supported. When installing the OS, do not select Server Core Option.

*5 : Performance may be degraded when large amounts of data are handled.

*6 : Capacity is calculated for data of one month (8 hours/day×20 days). Increase hard disk space or back up some operation logs to a different storage medium as needed.

*7 : Supported only when migrated from ApeosWare Management Suite 1.3 or 1.4.
